Receipt is acknowledged of the Amendment filed March 21, 2005.

Reasons for Allowance

Claims 1-24 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, McGowan, taken alone or in combination of other references, does not teach or fairly suggest a programmable device comprising, among other things, a programmable I/O circuit (PIC) associated with the first pad, wherein the PIC comprises a first output buffer adapted to present a first outgoing signal at the first pad and a first transmission gate connected between the first pad and the first output buffer, wherein capacitive loading at the first pad due to the first output buffer is lower when the first transmission gate is open than when the first transmission gate is closed., as set forth in claim 1; a programmable I/O circuit (PIC) associated with the pads, wherein the PIC comprises a plurality of single-ended output buffers, each associated with at least one pad and at least one double-ended output buffer associated with at least two pads and a transmission gate connected between each single-ended output buffer and its at least one associated pad, as set forth in claim 9; a programmable I/O circuit (PIC) associated with the first pad, wherein the PIC comprises a low-speed output buffer adapted to present a first outgoing signal at the first pad; a first transmission gate connected between the first pad and the first low-speed output buffer, the transmission gate having a lower output capacitance than the low-speed buffer; and a high-speed output buffer adapted to present a second outgoing signal at the first pad, as set forth in claim 12.
